- **IRREGULAR PAPS SMEAR**

HUMAN PAPILLOMAVIRUS (HPV)

By: Alex Gutowski

HOW IS IT SPREAD?

TESTING

TREATMENT

There is no cure. Warts can be removed, and a three-dose vaccine is now available.

HPV is spread through unprotected oral, vaginal, or anal intercourse.

POSSIBLE

CONSEQUENCES

- Increased risk of genital cancer in both men and women
- Increased risk of cervical cancer in women

If symptoms are present, through a visual exam. Women can get a "HPV Test" which will give a more accurate answer of what HPV she has. An HPV test is not a reliable test for men.
